DEVOPS SOFTWARE ENGINEER

A dedicated Software Engineer with hands-on DevOps delivery experience: containerization, CI/CD automation, deployment hardening, and operational reliability for modern web systems. Experienced in building secure, scalable services for fintech, healthcare, property management and social platforms.

Technical Skills

Frontend: React, TypeScript, JavaScript (ES6+), Vue.js, Nuxt, Next.js, Tailwind CSS, Redux Toolkit, HTML5, CSS3

Backend: Go (Gin/Fiber/net-http), Node.js (Fastify/Express), PHP (Laravel), Python (Flask/FastAPI), REST APIs, WebSockets

Mobile: Flutter, React Native, Expo

Databases: MongoDB, PostgreSQL, MySQL, Redis, SQLite

Cloud & DevOps: Docker, Docker Compose, Jenkins, Nginx, AWS (EC2/S3), Linux, CI/CD pipelines, Git/GitHub/Bitbucket

Security & Quality: JWT auth, OAuth flows, RBAC, API validation, rate limiting, Helmet/CORS hardening, audit logging, testing with Jest/Mocha/PHPUnit

Experience

Payserve Limited

Software Developer (05/2024 – Present)

- Build and maintain production services for invoicing, payment workflows, resident operations, and communication pipelines.
- Design REST APIs and background workers consumed by web/mobile apps, ensuring predictable contracts across teams.
- Support DevOps workflows using Dockerized services, Jenkins-driven automation, Nginx reverse-proxy patterns, and server operations practices.
- Work with cloud-hosted environments and integrations, including AWS-based infrastructure components and deployment workflows.
- Use team execution tools such as Jira/YouTrack (Payserve workflows), Trello boards, and Slack channels for sprint planning, incident follow-up, and release coordination.

- Contribute o reliability through structured logging, queue-based processing, and failure-handling improvements for async jobs

Belva Digital

Software Developer (12/2021 – 03/2024)

- Built and maintained client-facing applications using Laravel, Go, and Node.js for campaign and business platforms.
- Designed relational database schemas in MySQL/PostgreSQL with attention to performance and reporting needs.
- Supported deployment and environment operations across Linux servers with Nginx and secure release practices.
- Worked with cloud deployment contexts including AWS and Azure-hosted workflows for client project delivery.
- Collaborated through Jira/Trello task boards and Slack communication to keep delivery timelines and handoffs clear

Deveint Limited

Software Developer (05/2021 – 11/2021)

- Built backend services in Go and supporting Python integrations for production-oriented workflows.
- Integrated APIs consumed by Flutter, React, and Next.js applications with stable data contracts.
- Participated in deployment setup, environment configuration, and runtime troubleshooting across server environments.
- Used structured task tracking (Jira/Trello-style workflows) and team communication channels (Slack) to coordinate implementation and fixes.

Soft IQ Technologies Ltd

Software Developer (03/2021 – 08/2021)

- Developed operational dashboards using React and FastAPI to improve visibility for logistics and internal reporting.
- Implemented authentication and admin features using JWT-based access controls.
- Configured Linux server workflows including SSH deployment routines and Nginx service configuration.

- Supported team workflow discipline via task tracking boards and collaborative communication habits for faster issue resolution.

Projects

Payserve Platform

Payserve DevOps Pipeline is the deployment and operations workflow used to package services, automate releases, and run platform modules reliably on server environments.

- Containerized service components with Docker to standardize build/runtime behavior across environments.
- Used Jenkins-based pipeline automation for build, validation, and release flow consistency.
- Configured Nginx and server-level routing/proxy patterns to expose APIs and web services safely and efficiently.
- Supported environment configuration, release rollouts, and incident troubleshooting to keep operations stable.

M-Pesa Daraja Service

Node.js, Express, MongoDB

[Github](#)

This is an Express + MongoDB M-Pesa integration API for multi-tenant businesses, supporting C2B validation/confirmation, STK push, and callback/webhook processing

- Implemented STK endpoints for push initiation, callback handling, status query, and reference-based transaction lookup.
- Implemented C2B endpoints for validation, confirmation, URL registration, and sandbox simulation per business.
- Built business/account/transaction modules with scoped models and indexed transaction fields for reconciliation and reporting.
- Maintained transaction lifecycle states (PENDING, VALIDATED, COMPLETED, FAILED, etc.) with internal references, callback payload capture, and stats aggregation.

Infrastructure Reliability and Observability Workflows

This operational layer focuses on service health, runtime visibility, and faster issue recovery in production-like environments.

- Applied log-centric debugging and verification checklists during deployment and post-release validation.
- Improved resilience through repeatable runbooks and practical rollback-aware release habits.

- Collaborated with development and product teams to reduce downtime and improve delivery confidence.

Education

Moringa School

Full Stack Software Development Certificate

12/2023 – 06/2024

Technical	University	of	Kenya
BSc.	Business	Information	Technology
06/2019 – 12/2023			

Referees

Nelson Ateya

Systems and Database Administrator
